Physics is a difficult subject to teach, especially with such a large class, but even so, I think students would have benefitted a bit more if the material was taught more in the traditional style - with problem solving done on the board instead of just flashed on a screen in power point. Exams are more calculation based and I think focusing on problem solving skills would have helped.

However, Dr. Morris ~~was~~ is still a wonderful professor. He makes himself extremely accessible to his students, offers opportunities to "make-up" missed classes and takes each suggestion into consideration. I think he is a great professor as well as friend and I ~~hope to see him~~ hope to see him around teaching at Rice again next year.

I dropped Physics before because I did not like the professors. But Morris is the best Physics professor I could imagine. He is young and energetic. His presentations of the material is highly effective. I liked how we could vote in class. People actually came to class and payed attention. He is a professor whis devoted to his subject and helps students to appreciate it. Before exams he stayed until midnight to answer questions → he was open to any kinds of questions!
Great professor!

Dr. Marris was a great teacher to have for physics. He was funny, approachable, & friendly. He also presented the physics material in a way we could best understand it. The power point presentations were a very effective way to keep our attention and help us focus on the lecture content. I just ~~felt~~ feel really lucky to have had Dr. Marris as a physics professor both ~~semesters~~. I believe he helped me learn physics to my potential. ~~and~~

~~and~~ ~~the~~ ~~was~~ ~~so~~ ~~interesting.~~

Also I learned that I enjoy understanding the concepts of physics after taking Dr. Marris' class.

I thought Gary Morris was a very good professor. He was so animated during class and even though he had surgery, he still came to class to give lectures. He is so approachable and available to the students.

The help sessions were very valuable. The TAs all knew what they were talking about. However I think I got too dependent on them.

I wish this class did not cover so much material because it is difficult to learn it all in just a semester.

I understand that there was a lot of material to cover, but I thought the powerpoint presentations weren't as helpful as chalkboard lectures would have been.

I can not stress how wonderful Dr. Morris was as an instructor. The time + effort he put into helping me was incredible and if not for him I would have done much worse in the class. He is incredibly intelligent but has the rare gift of being able to explain complicated concepts to students. He humanizes the department and brings an added touch of youth + excitement to the class. He is an asset to the university and should be treated as such.

As for the class, it was a fair survey of physics although sometimes felt like it was more for physics majors than pre-meds and science majors. I think the aim of the class should not be to make it more like phys 101. We are not engineers and I wish the class was a little easier in that regard. However, it was organized well and the work contributed positively to my understanding.

Good job Dr. Morris! He has conveyed physics to a wide variety of ~~students~~ ^{who} students otherwise had no interest in physics!

Dr. Morris is an outstanding professor because he is truly enthusiastic about physics and wants to share that enthusiasm with students. I have never known another teacher at Rice who puts so much time, and effort into finding a creative way to present physics. Moreover, Dr. Morris shows kindness and interest in each student by learning their name, visiting colleges, and just hanging out with students. I find this outstanding because of the large size of the class.

While I decided that I really don't understand physics, this course went as well as I could have hoped for. Dr. Morris is an excellent teacher & while I didn't like doing the problems, I enjoyed class due to his enthusiasm for the subject. If given the option not to take physics I probably wouldn't, but I enjoyed having Dr. Morris & would like to take another class taught by him or in his style (if it weren't physics.). I enjoyed this course as much as I could for what it was. I thought it was difficult to understand, but without having physics in high school was fairly happy with my results.

Dr. Morris is a really good teacher, he seems genuinely interested + excited about physics and conveys that to his students as he teaches. Although the class size was too large to allow him to know all of his students, he worked the colleges for lunch every week which made him much more approachable than other professors who teach large classes. Also, if you went to and talked to him once or twice he remembered your name. He was always well organized + taught clearly and fairly thoroughly. I think if the subject wasn't physics, I would have enjoyed the class.

I cannot give a higher compliment to Dr. Morris than to say he is the best professor I've had at Rice. I still am impressed by how willing he is to help a student at any hour. I felt so comfortable going to office and I appreciated that so much. That's where I did most of my learning. I can't speak highly enough of Dr. Morris. He was enthusiastic, caring, and honestly dedicated to educating us. Rice must make sure to ~~not~~ keep professors like him.

Although the course material was very difficult for me, I cannot say that course wasn't fair. Class was well organized and well taught.

Only complaint is the time allotted for tests and that I feel like the students who worked hard in this class (did all rec. problems, attended all help sessions and class consistently) were not rewarded accordingly. Perhaps gearing the tests toward specific lecture material would be a solution to give an advantage to those who attend.

Overall, material was not the most pleasant, but Professor Morris made the class worth it!

What I liked about the instructor was that he was very helpful, approachable, and I believed he genuinely cared for the ~~the~~ students. The material was useful as well. Unfortunately, in such big classes, not everyone gets the extra help some need to understand unless they seek it out themselves. The help sessions are extremely necessary and I think that this should be stressed in the beginning of the course. The help sessions are almost like a required part of the course to do ~~the~~ homework and understand.

Dr. Morris was wonderful and fabulous. He truly made Physics an interesting and manageable subject - the in-class demos were interesting, the power point presentations were entertaining; he was very accessible for outside class help. What I really loved about the class was that Dr. Morris really seemed to want the students to do well. I did not like the required multiple choice section - I probably would have done much better in the class without the multiple choice section! On the tests, it would have been more helpful if the graders had given a better indication of mistakes. I felt the graders were fairly inconsistent with grading.

I can't say enough good things about Dr. Morris!! Thank you!!

WAS PRESENTED IN AN ENGAGING
MANNER. I DON'T THINK I DID AS
WELL THIS SEMESTER, IN PART,
BECAUSE THE MATERIAL WAS HARDER.
ALSO, MAKING ^{THE} A MULTIPLE CHOICE PROBLEM
REQUIRED DIDN'T HELP ANYTHING. IF
THE TESTS COULD BE MADE TO COUNT LESS,
I WOULD HAVE DONE BETTER. IT WAS ALWAYS
A SHOCK TO DO WELL ON THE HOMEWORK AND
RECOMMENDED PROBLEMS AND THEN GET THE
TEST AND DO POORLY.

I really enjoyed this class. The lectures were great. The only thing I would change about them is that the room is too cold. The instructor was always offering support and got to know the students individually even though it is a large class. Though it is not in my areas of interest (I dislike anything related to math), I still found it enjoyable at times and very useful. This is the only class I have liked out of any math, physics, or chemistry I have taken at Rice. We are very lucky to have Dr. Morris as an instructor at Rice University.

Dr. MORRIS is very enthusiastic about the course- this made class more interesting. He was always willing to meet outside of class to help with homework, concepts, etc. I enjoyed getting to know him at lunches at my college and in the office. The course was challenging but the material was presented effectively and the outside help was very useful.

Even though I despise physics, I feel that Dr. Morris makes this course as good as it can possibly be. His slides were excellent during lectures. He was always enthusiastic and understanding, and unlike other profs of large lectures, he was willing to personally help students with the material at the help sessions. I think this course is effective and fair.

Dr. Morris was always very helpful & was (is) a very effective professor. Any problems I had w/ the class stemmed from the fact that I didn't like physics & I didn't learn well ~~at~~ ^{from} the manner it was taught - concepts first, then you apply them to the math/problems on your own - I'd like to see more transition between concept & application in class.

The exams were way too long. It was always difficult to finish them, even when I came to the 8am test period and got 5 extra minutes.

Being required to do the multiple choice questions also lowered my grade.

Lectures were not very interesting or helpful - only working lots of problems taught me the material.

The help sessions were very useful. However the undergraduate TA's didn't always know what was going on or how to solve the problems. Perhaps graduate students would be more familiar with the material or solution sets should be given to the TAs.

The class was OK overall - Dr Morris tried really ~~hard~~ hard but he can't help it - physics is just boring.

I was impressed that Dr. Morris worked hard to teach us when he had his knee problem. He's a very devoted teacher & consistently prepared for class. Very approachable & available to questions also. The class sucked though. I hate ETM in Dr. Morris tried to make it fun but no one can make ETM exciting. The only that should change is the multiple-choice on the tests - there should be less m-c q's or not make it mandatory.

Dr. Morris is an enthusiastic lecturer. However, he teaches as if all of his students are physics majors. Most of us were bioscience, english, pre-med individuals and the information went far above our heads. I understand that he is a new professor and is probably trying to get tenure, however, he should not allow the pressures of his peers dictate how he teaches his courses. The information was presented at a much higher level than necessary for a 100 level course. The lower courses are important to insure the students know the info for higher level courses. Those who find the course too easy should be taking PHYS 101 or the honors PHYS.

Nice try - Dr. Morris always seems happy about teaching over class And tries very hard to make it fun + interesting for everyone. I'm a junior. I've put this off for 2 years so you must realize I absolutely did not want to take this class. 1) I don't like Physics in general + 2) this is a waste of my time - I'm a bioe non-premed. I'm never going to take the MCAT + I don't like being forced into taking this class. Enough about that. Oh book wasn't very clear. TAs should write what the students did incorrectly on the test. For me this was a "hate the class, love the teacher" course. Give Dr. Morris a raise.

I liked Phys 126, I suppose, + a large part of that was because of Dr. Morris — he was an EXCELLENT teacher + tried his best to keep the class interesting. I will be eternally grateful for the "redemption" points + for the fact that effort constitutes a large part of the overall grade. What a terrific grading policy he had — how hard we worked actually MATTERED.

Dr. Morris was WONDERFUL about being accessible — even through his surgery, he didn't miss a class! (He could be better about returning email but he was physically available quite a bit, which was very helpful.) I have heard from RAs + older staff @ Rice that before Dr. Morris, the Phys 125/126 course was tedious + perhaps poorly taught — Congratulations to Dr. Morris on turning the class around, for trying so hard with us, + for his cheerful outlook — if I have to have a morning class, at least it's with an outgoing, happy, positive prof. who truly cares about his subject. The class wishes him a speedy recovery!

I understand that physics is tested on the MCAT, however since not all bioscience majors become doctors, the course should not be a requirement.

Since the lectures are extremely powerpoint, and they are available online, attendance at lecture is pointless. Either the lectures should be changed, or made not mandatory.

There were frequently homework problems or topics that were not covered in lecture. Either change the lectures, or change the homework.

I think POWERPOINT is NOT a way to TEACH physics. There is a difference in working a problem through powerpoint and working it out on a chalkboard. If you HAVE a problem with the way something is worked out on the chalkboard, it is easier to figure out what happened. Plus, working it out with the prof helps understand details that may have been excluded.

Also, Dr. Morris should HAVE made a greater attempt to CATER to the NEEDS of people who did NOT TAKE the course last semester. A 4 page, SINGLE SPACED, 10-point font syllabus does not help much. Who really has TIME to read the whole thing?!? Not a pre-med

There should have in general been more of an attempt to go over recommended problems! A review session from 7-12am is not very helpful for people who live off-campus. There should be a time to see a TA or something about rec. problems not just at the review sessions! People use the review sessions to figure out 4 homework problems! There is little time for rec. problems.

Physics 126 section would
connections with students.

By the way, maybe providing another
allow a smaller, more intimate

This course is possibly too difficult since it is not supposed to be for physics or engineering majors. The grading procedure & class policies are extremely convoluted, so the student has difficulty figuring out how he's actually doing in the class.

The professor is knowledgeable and helpful but the presentation of the material is too vague and theoretical.

Dr. Morris is a really good teacher. He is much better than ~~I~~ any other science teacher I have had. He stimulated my interest in physics and I wish I could take more physics classes.

This class challenged me. It wasn't too difficult or too easy.

Dr. Morris is awesome!!!

The course was well organized and interesting, especially for one with lectures that have 100 people in them. I think that the way we were graded (homework, exams) was more effective than most classes. The material was harder this semester than last, yet I think that the info. was well conveyed to the class.

Dr. Morris was a very enthusiastic teacher who really cared about TEACHING the students. He was always very approachable for help, and always put students first. It was nice to see a teacher who really cared about the students understanding the material. The course material, although much more difficult than I was expecting, was worthwhile in learning. Because we went into such great depth of concepts, the MCAT physics section was much more easy to understand. Dr. Morris didn't just teach us the material, but more importantly, he taught us how to THINK. The ability to solve problems rather than just spitting out formulas we memorized was much more beneficial in the long run. Overall, the course was difficult, but fair. As a teacher, Dr. Morris is one of the best I've ever had.

Morris is a good teacher + the course is taught well. I found lecture to be pointless. I would rather have spent that time doing ~~recommended~~ recommended problems. That was what the tests were based on. ~~so~~ I know physics is important to everyday life & that it'll always be a part of everything I study, but I really began to dislike this class near the end. Morris definitely knew a lot about physics but I felt with a bank ~~from~~ guy to talk to him. His method of teaching - powerpoint is very helpful especially for studying for exams. Course is good - I just don't like physics.

Professor Morris is very excited about physics. This made lectures more engaging. He tried to make physics more easily to understand, but it is a difficult subject none the less. In my case, I think the exams were too difficult, and I only say that because I don't think my exam average reflects my knowledge of physics. I'm pretty sure that if the multiple choice section was not required, I could have done much better. I realize that by requiring the multiple choice, you are attempting to assess our knowledge of the material as a whole, but those questions did not in a lot of cases because they were worded in a confusing matter. The multiple choice on the optics test was a lot better than the others, and was a better test of my knowledge of the material. Overall, a good class, but not for my GPA!!! 😊😞

Dr. Morris is a very enthusiastic professor who cares about his students. He would be more effective if his class wasn't taught at 9:25 and wasn't 1:15 long. It's hard for most people to pay attention for this long. The tests in 125 were more fair, so I think that the inaccurate assessment of my physics 126 knowledge has made me bitter. Morris is an effective teacher, but his methods aren't conducive to my learning style.

He is a very student-orientated teacher. Sessions before exams were nice to have. Lectures were interesting. However, one should not be required to do multiple choice or should at least get partial credit for it. Homework, recommended, and lecture questions should be more like exam questions. Extra-credit quizzes and homeworks were nice to provide. Exam reworks should be graded and given back earlier.

Professor Morris is still one of the best profs I have ever had, but I did not like physics in general this semester. I didn't feel like the amount of work I put in was necessarily reflected in my grades, so that was very frustrating. I don't know whether improvements could have been made in the course to alleviate this problem or not; it just seemed like the tests were much more difficult, but I highly recommend this course to any pre-med or anyone interested in physics for that matter, since Professor Morris is a wonderful, wonderful teacher.

Your energy makes class interesting and easy to pay attention to. Love the notes - a lot of effort went in. I personally have no complaints, it fit my learning style perfectly.

Oh, the only problem is that we turn in our worked problems on the worksheets & they aren't available on-line... I wish there were some way we could have access to our worked problems.

It's also hard to do suggested problems when you don't know if the answer you got is right. I'd recommend only assigning problems in the answer book.

This was ~~one of~~ the most pleased and informative ~~instructing~~, ~~ambitious~~, class that I expect to take at Rice. I feel that I really learned in the two semesters, although the work was typically slow and overabundant, for which I am grateful.

The only complaint that I can think of is the timing and location of the quizzes. They should be available from the very first day of class, even if the deadlines are the same. In such a manner if we have free time to read, and discuss, or if we can complete several quizzes and chapters
