Appendix A: Descriptive Statistics

In this appendix, you will find descriptive statistics for all of our analyses, organized by issue area. For each issue area we present a) descriptives for the DV, b) crosstabs of SOLS changes and Regime type, c) descriptives for the control variables, d) crosstabs of Other leader transitions and Regime type, and e) crosstabs of SOLS change and Irregular leader transition.

Appendix B: Supplementary Analysis to Main Results

In this appendix, you will find supplementary analyses mentioned in Section 4.1, organized by issue area. For each issue area, we show 1) full results tables for main analyses that were not displayed in the manuscript for space reasons, 2) results from the robustness check that drops cases of regime transitions, and 3) results from any issue area-specific robustness checks.

Appendix D: Irregular Leadership Change

This appendix reports results discussed in Section 4.2.2. For the UNGA and trade dependent variables, we show interaction models with a) the *Irregular* variable and b) the *Irregular Exclusive* variable. For the alliance and sanctions dependent variables, we only show interaction models including *Irregular*. The *Irregular Exclusive* variable was dropped from our models because it predicts cases perfectly.
